

# Comfort at Your Fingertips

## Some of Deburns benefits are:

- Fast-acting pain relief
- Helps cool and soothe the skin
- Helps protect from infections
- Starts working almost immediately
- Won't leave the skin feeling tacky
- Easy-to-apply
- Fast-drying
- Doesn't trap heat in
- Enhanced with skin nourishing Aloe Vera

Deburn is a spray that can help stop burning pain from a light burn or any heat source including sunburns. It can provide fast-acting and soothing pain relief from these minor burns. Beyond relieving pain, DEBURN's cooling effect penetrates deep into the skin and helps prevent the formation of blisters, which, in turn, helps to prevent ugly scars.

It instantly forms an Infecta-Shield™, a celluloid coat that can prevent contamination and infections. Unlike burn pads that are extremely painful to remove for further treatment,

Infecta-Shield™ is water soluble – it washes right off, and is completely pain free!! DEBURN penetrates the damaged skin, helps promote healing and helps prevent the formation of boils, fending off future scarring.

Deburn spray is unlike many first-aid burn products, since it won't interact negatively with any burn treatments typically administered by health professionals.

Debleed is formulated with natural eco-friendly ingredients and it is not affected by moisture, which is very important for places with high humidity.

### Deburn provides relief from:

Cool and relieves pain instantly | Protects from infections and scarring | Effective on all types of burn | All Natural, no steroids.

The convenient spray is easy to carry in a pocket, purse or first aid kit. It can be carried on airplanes as well.

### Application:

Shake well before use. Apply liberally to the affected area.
